TESTIMONIAL

Incon Inspection Consultants Ltd have been providing a range of Inspection services to VT Group since June 2009 on the Biothermal Project. This is a project to manufacture 9 off nuclear reactor components to be used in the British Energy nuclear power station at Dungeness B, and consequently requires extremely high levels of manufacture and inspection. Each Biothermal is manufactured from a series of machined forgings and tubes of both stainless steel and carbon steel.

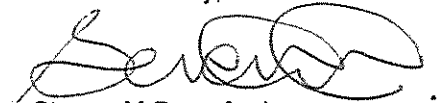

The range of services provided by Incon have included, chemical and mechanical tests on materials and components, magnetic particle inspection and radiographic examination.

As you are aware we have been asked by British Energy to accelerate our delivery programme and to complete delivery of the Biothermals, 5 months earlier than originally contracted. We now expect to be able to complete this accelerated delivery, and this has only been possible by the excellent service provided by Incon :-

- Excellent responsiveness. Incon have accommodated all our planned and short term requests for radiography both at Incon Laboratory and at our works.
- Dedicated technical support – You have provided dedicated radiographers who at all times have been fully aware of the project background and specific technical requirements. Wherever we have had defects in welds your radiographers have provided full interpretation and advice on locating and resolving the defects.

We have no hesitation in recommending your services to others.

Yours sincerely,

Steven M Beresford
Project Manager
